

**Amendments to the Specification**

Please amend line 2 of the Abstract as follows:

The hub engages a ~~ratable~~rotatable intermediate plate which is mounted in spaced relationship inside an annular hub.

Please amend paragraph [0015] of the Specification as follows:

The first cam surface and the first cam follower surface cooperate to cause the outer peripheral edge of the intermediate plate to move from the retracted to the expanded position during rotation of the drive member in the ~~second direction~~agitate mode.
